

# Delair After Flight Tutorial

## UX11 PPK Work Flow

July 5, 2018 | Chase Fly | Geospatial Product Manager

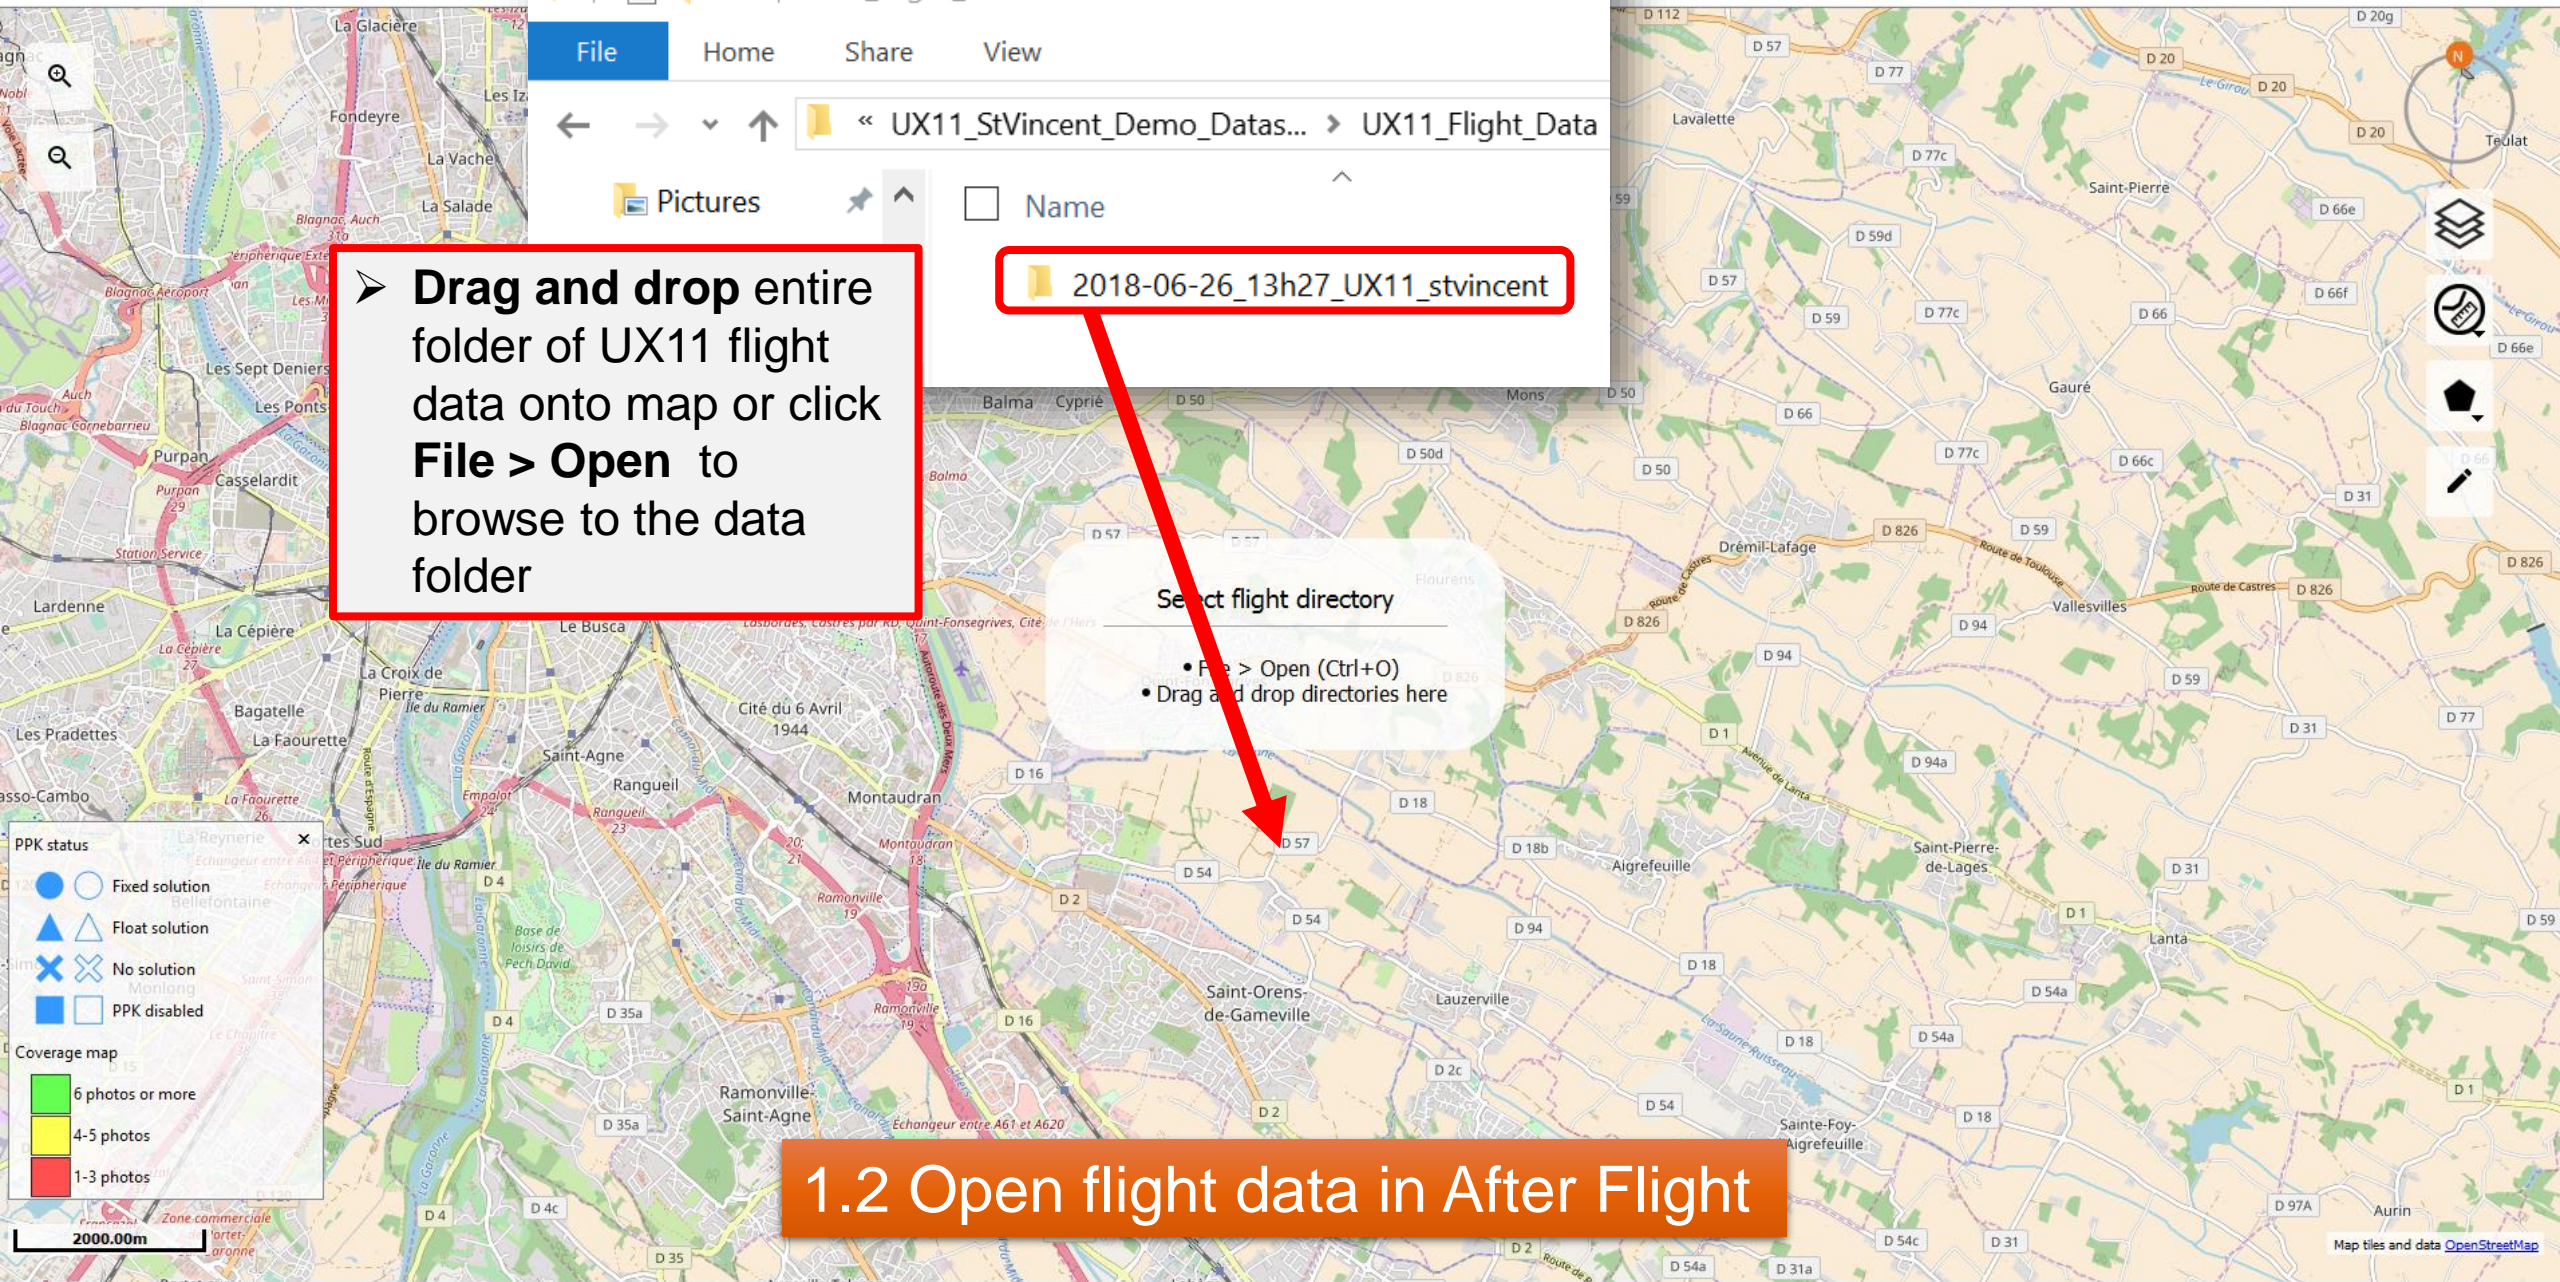

# PPK Work Flow

Step-by-step with screen shots using StVincent sample dataset

## 1.1 Open flight data in After Flight

➤ Drag and drop entire folder of UX11 flight data onto map or click **File > Open** to browse to the data folder

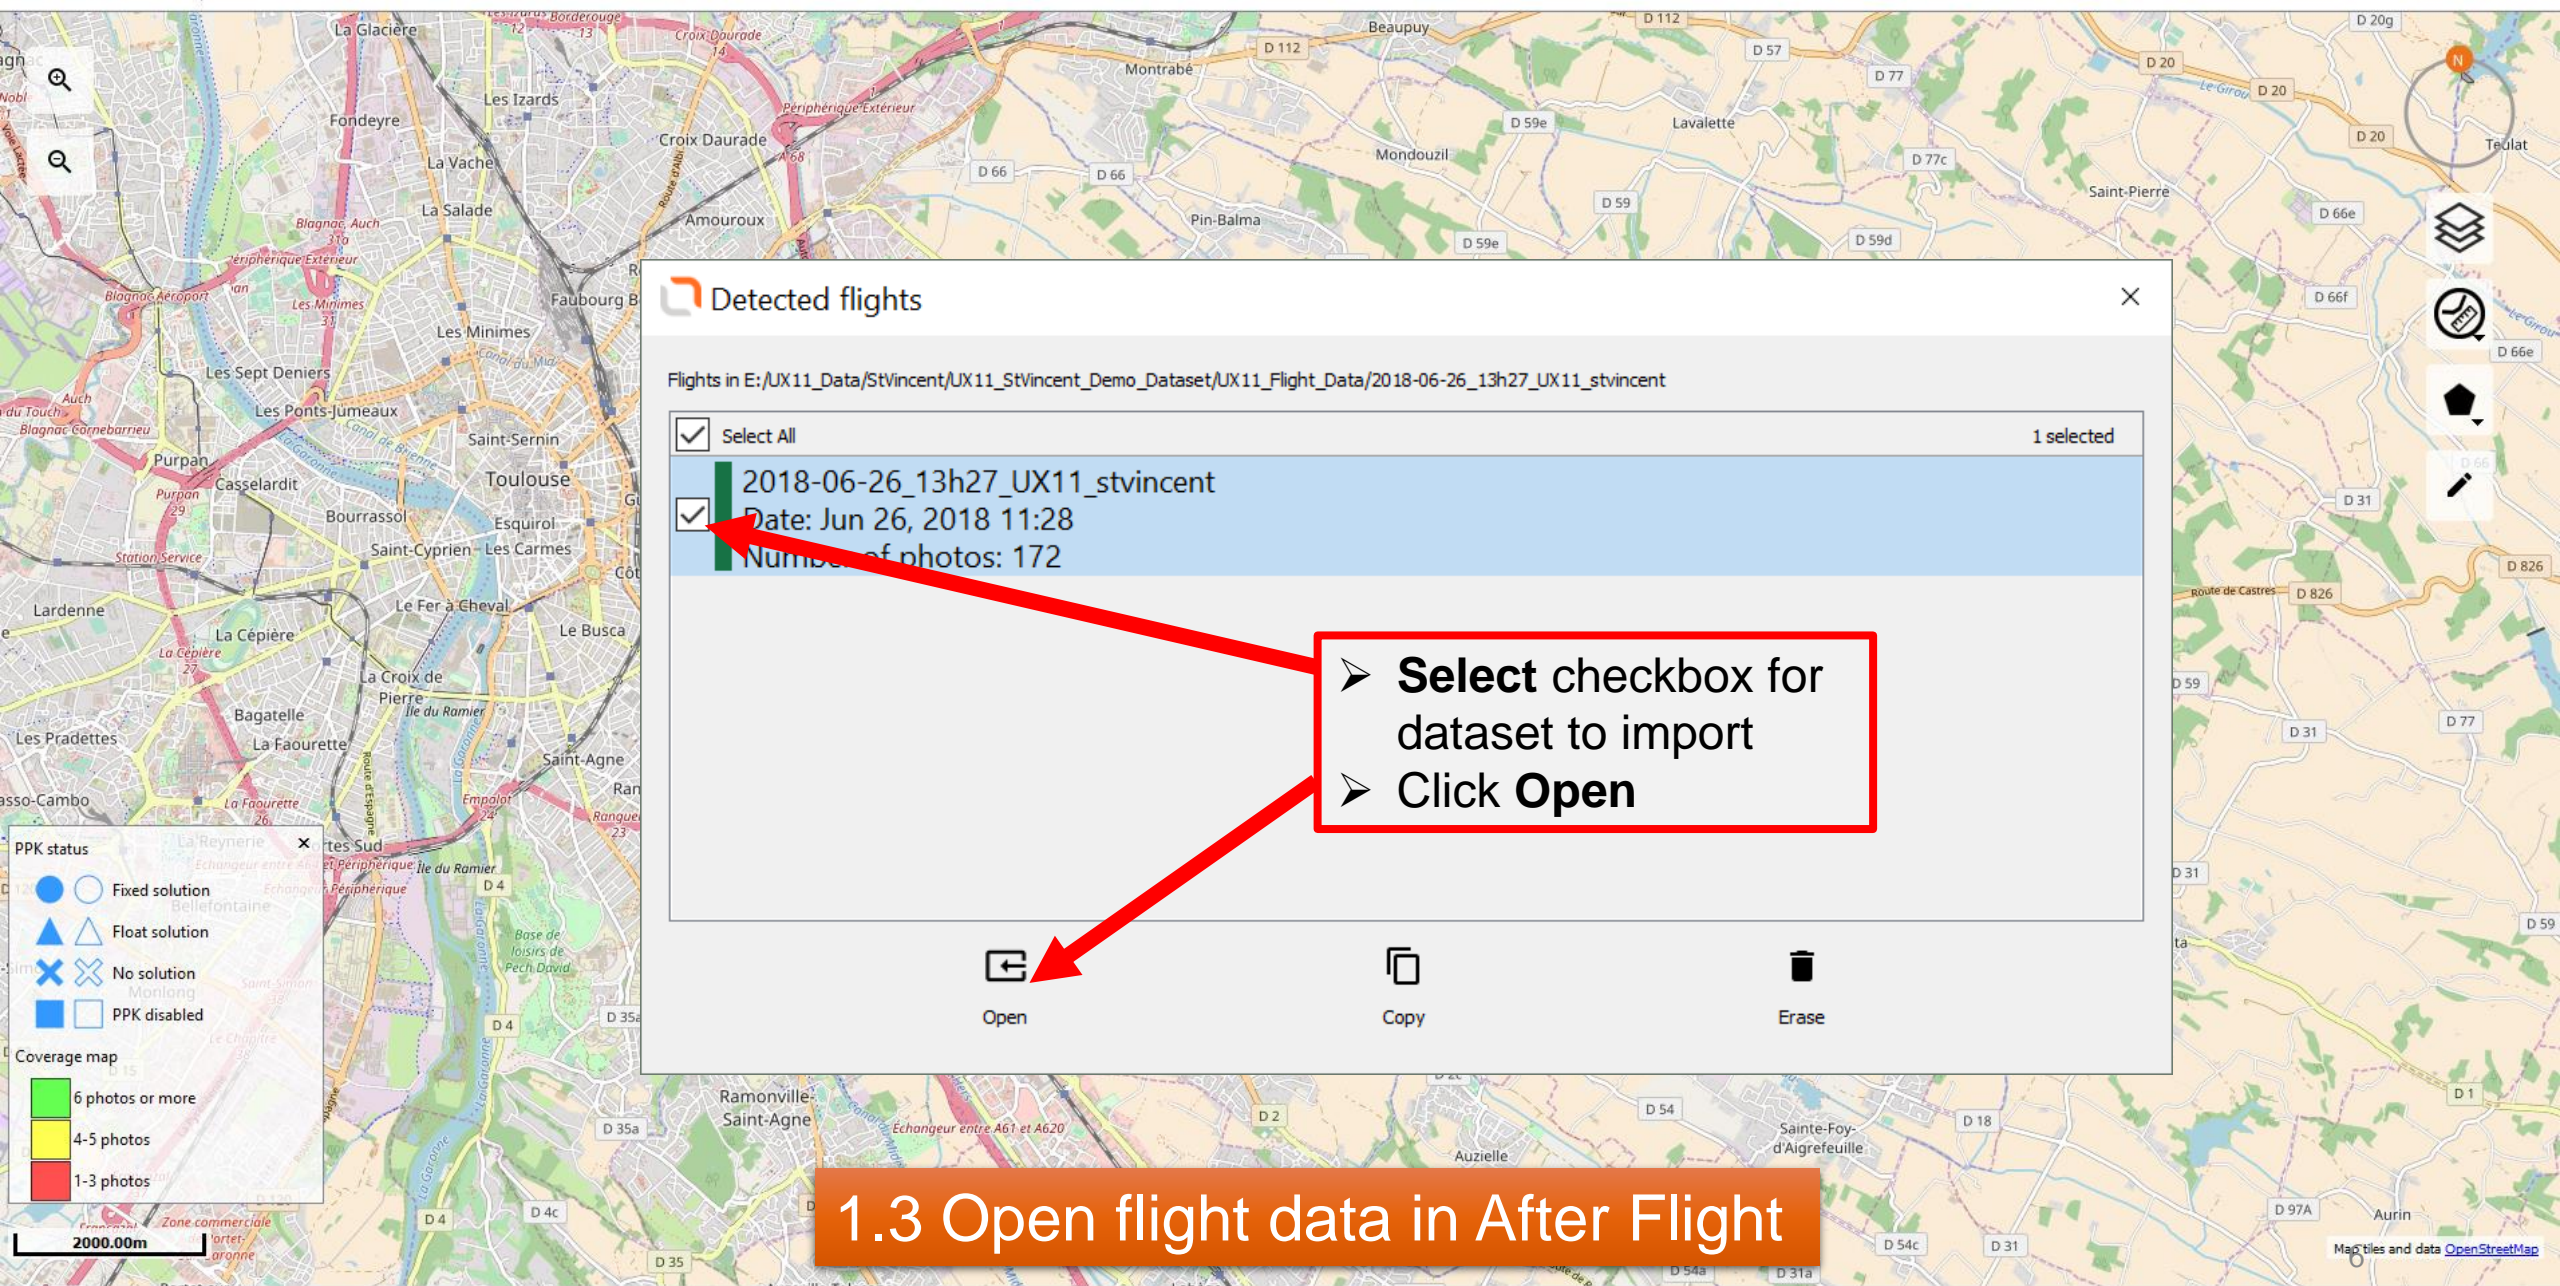

2018-06-26\_13h27\_UX11\_stvincent

Select flight directory

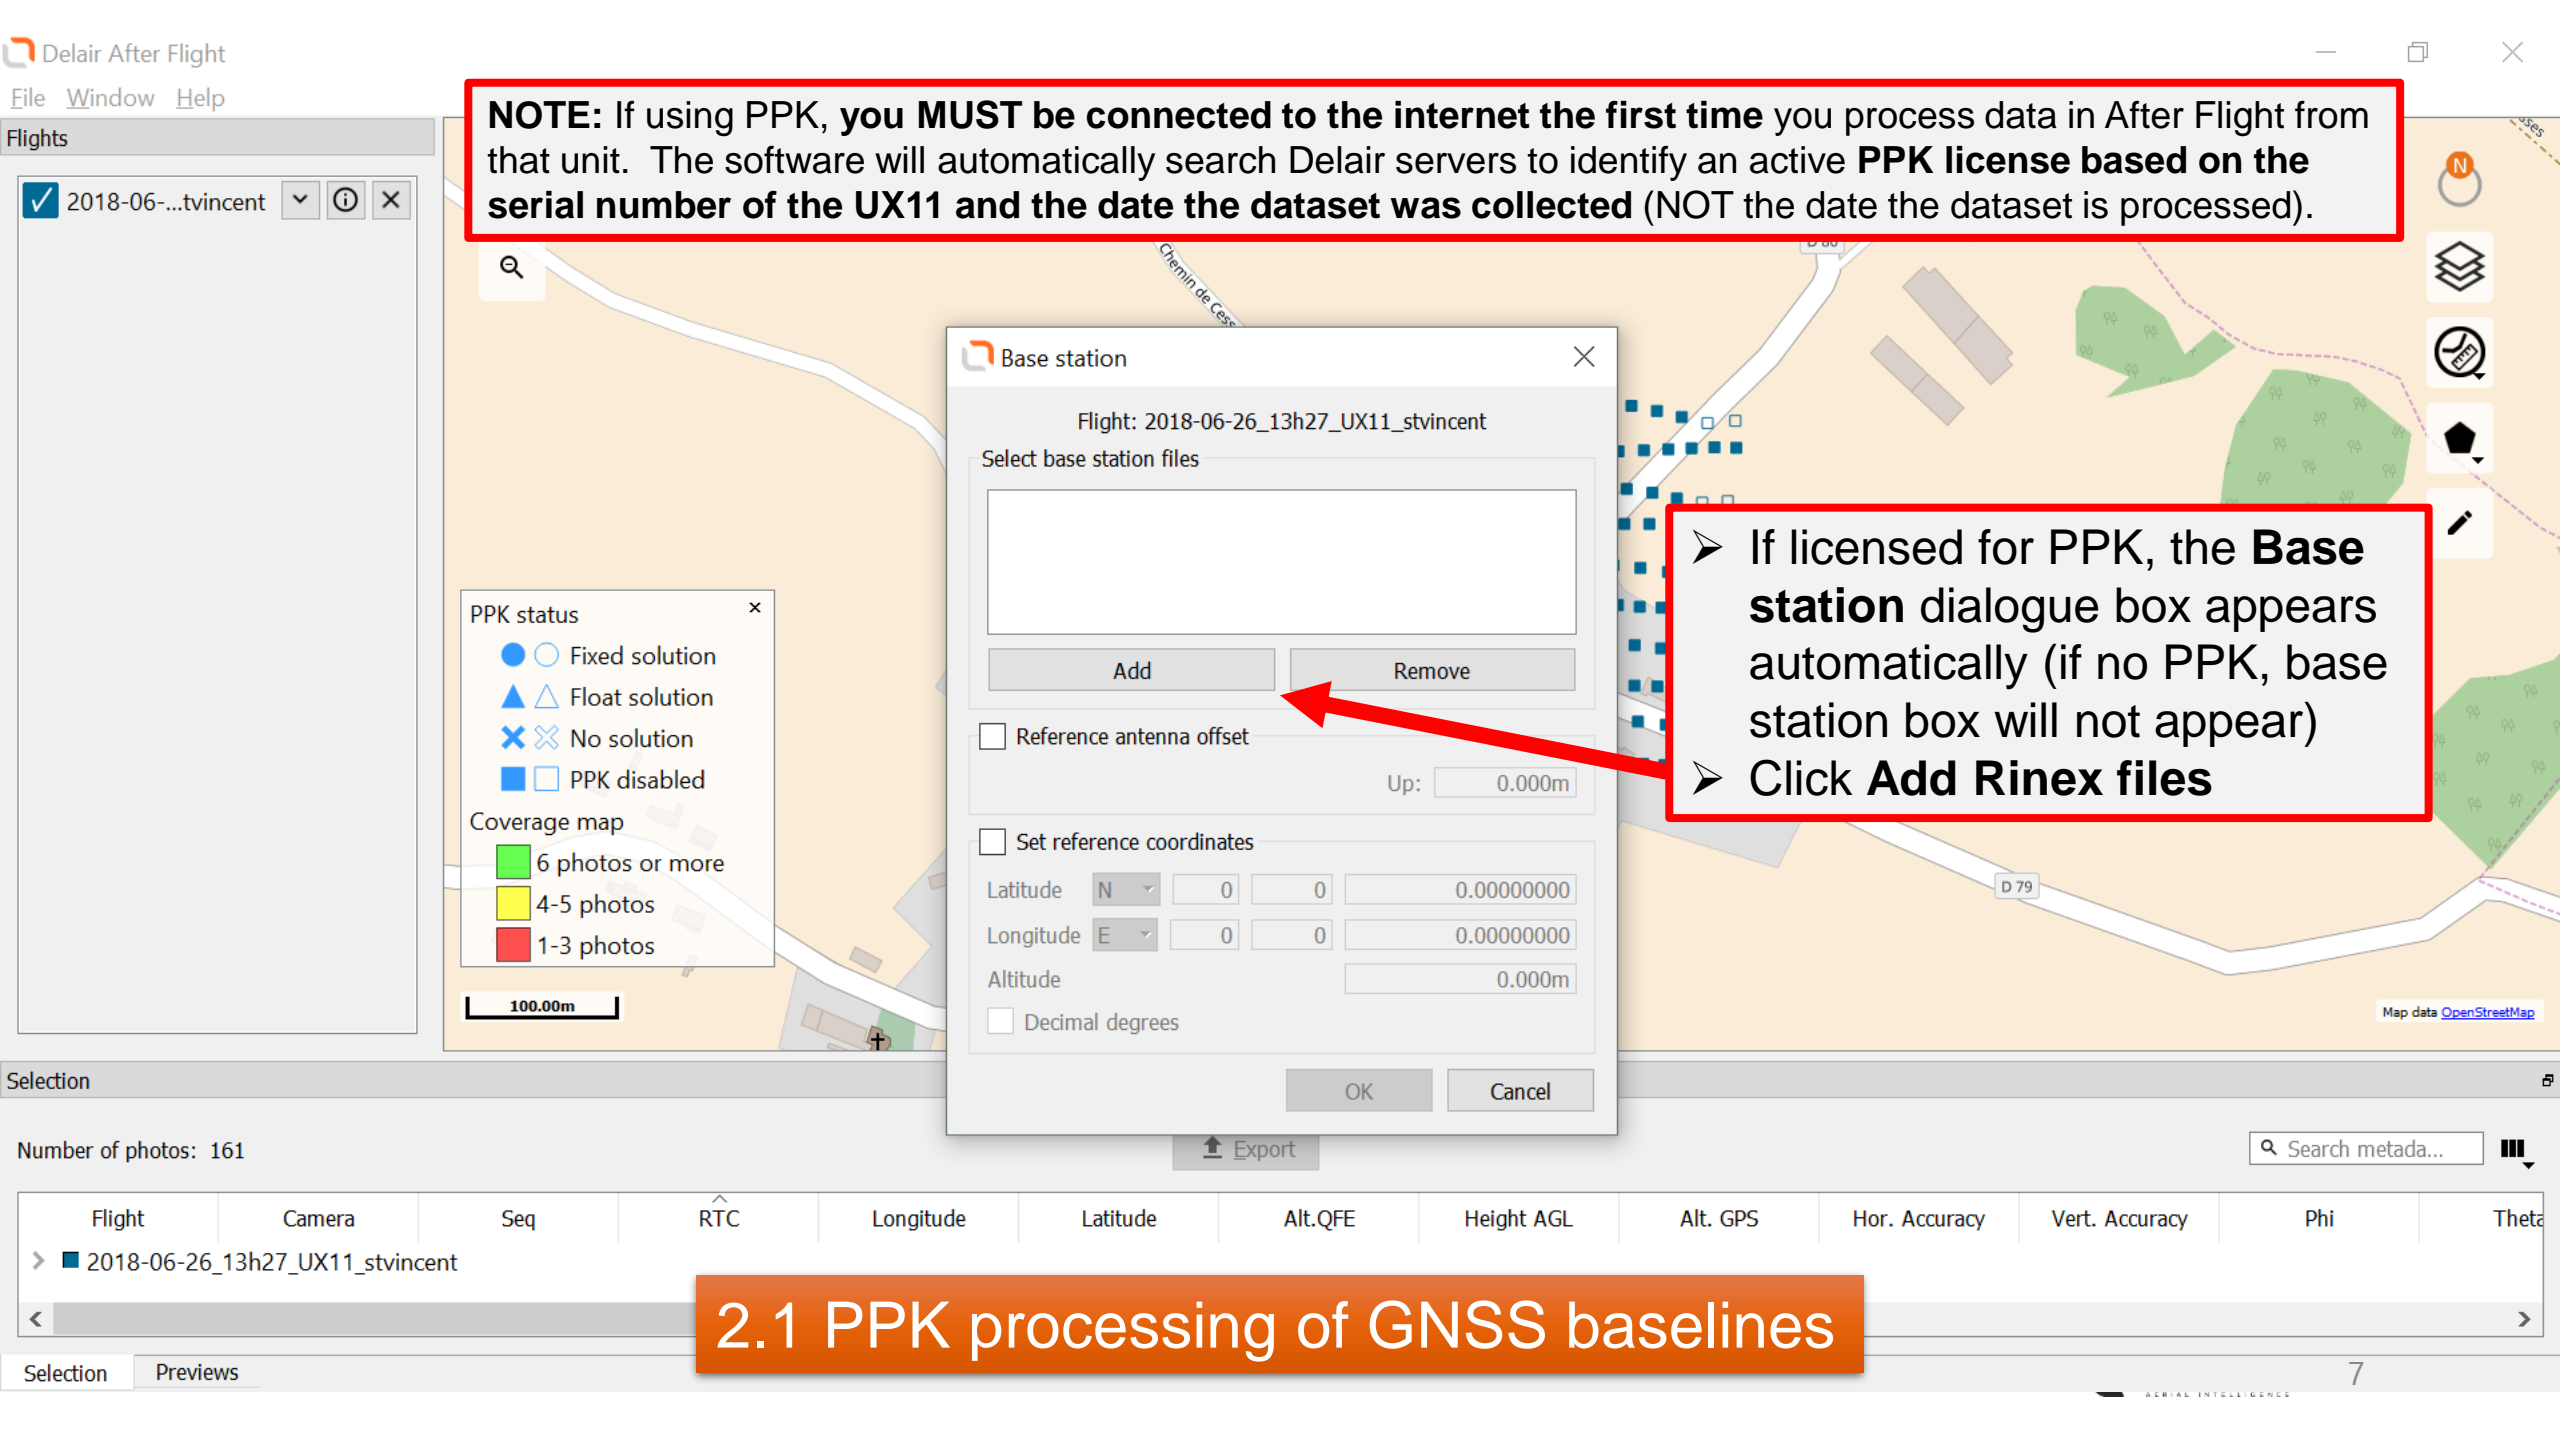

- File > Open (Ctrl+O)
- Drag and drop directories here

## 1.2 Open flight data in After Flight

## 1.3 Open flight data in After Flight

**NOTE:** If using PPK, you **MUST** be connected to the internet the first time you process data in After Flight from that unit. The software will automatically search Delair servers to identify an active **PPK license based on the serial number of the UX11 and the date the dataset was collected** (NOT the date the dataset is processed).

- If licensed for PPK, the **Base station** dialogue box appears automatically (if no PPK, base station box will not appear)
- Click **Add Rinex files**

## 2.1 PPK processing of GNSS baselines

✓ 2018-06-...tvincen

## Select Rinex files

UX11\_StVincent\_De...

Open

Cancel

- Locate base station data
- **Ctrl + Click** all RINEX files
- Click **Open**

## 2.2 PPK processing of GNSS baselines

**NOTE:** It is recommended to manually set a reference coordinate of control quality for the position of the base station to ensure accurate georeferencing. Otherwise the corrections will be relative and there may exist a shift in your dataset. It is recommended to use standard ITRF2008 (Epoch 2005.0) coordinates in lat/long. Altitude should be in meters (height above ellipsoid).
